

Coq POPL meeting, 2014

Coq survey

Thomas Braibant

Why?

- Know the users
- Know what they do
- Know how they work
- Know what library / plugin they use
- Know what they find important

Guide development?

Who?

P. Boutilier

T. Braibant

M. Sozeau

E. Tassi

+ anonymous contributors for questions

What?

- ~120 questions
- survey platform provided by Inria
- ~30 minutes burden time

Goals of this talk

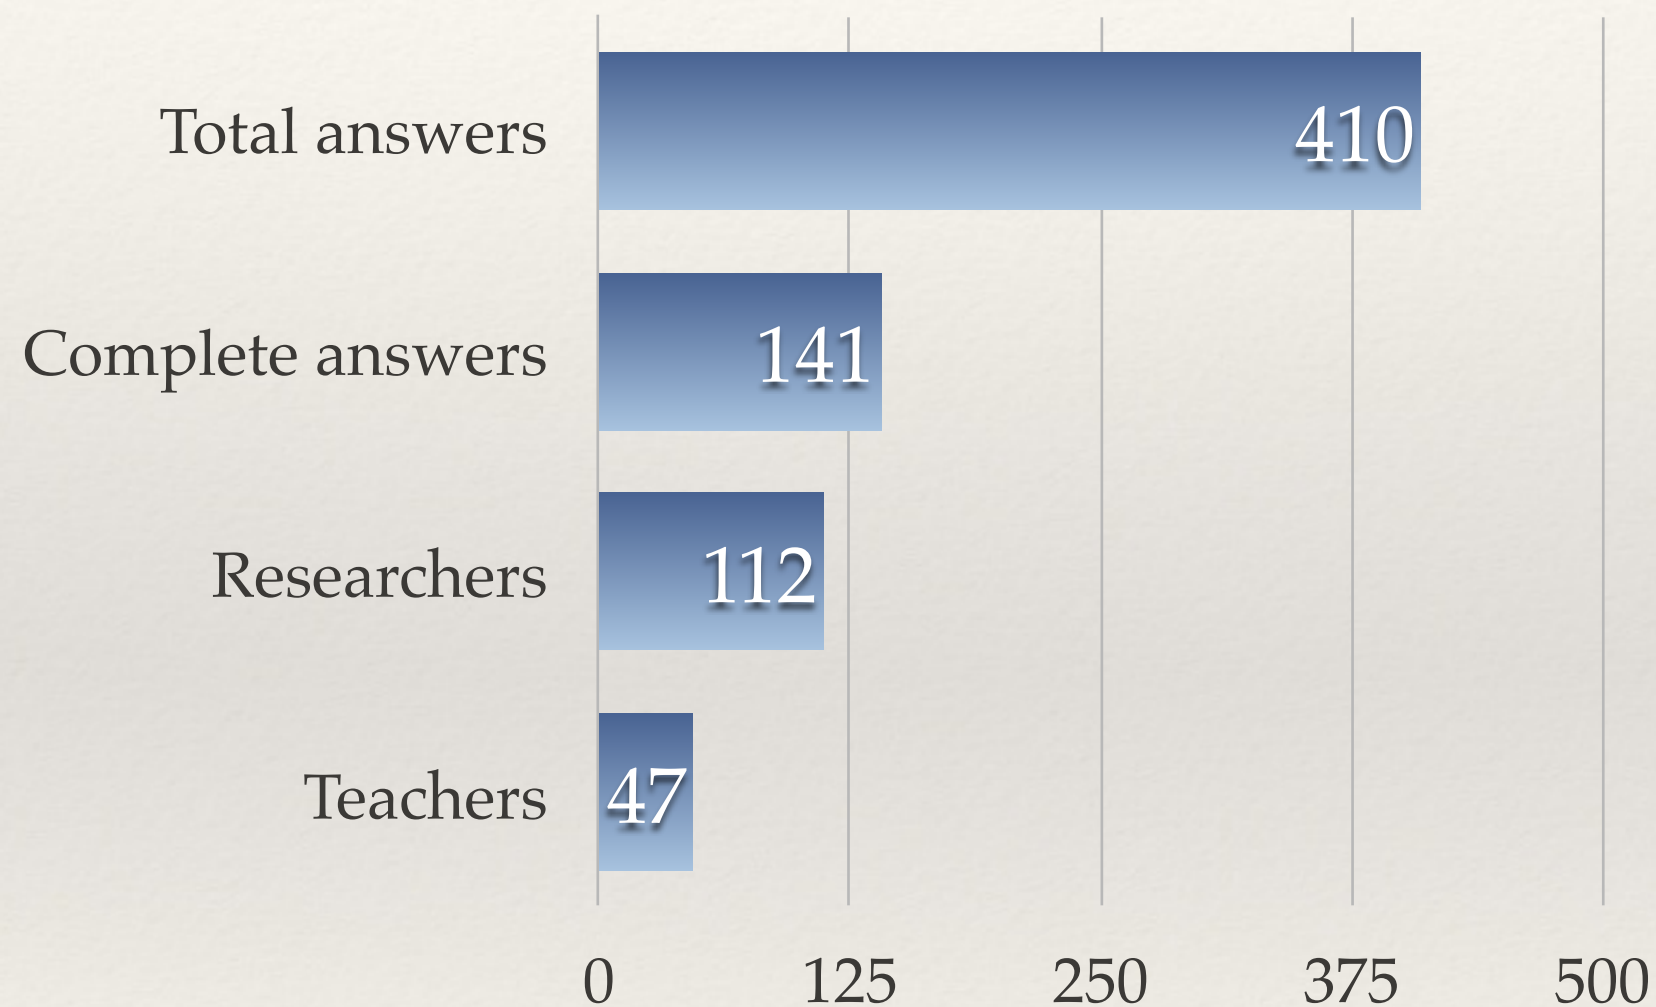

1. Present preliminary results
2. Be interactive (questions welcome)
3. Gather comments about the data, or idea bout how to use it

(Also, it is not too late to fill it up ;))

Numbers

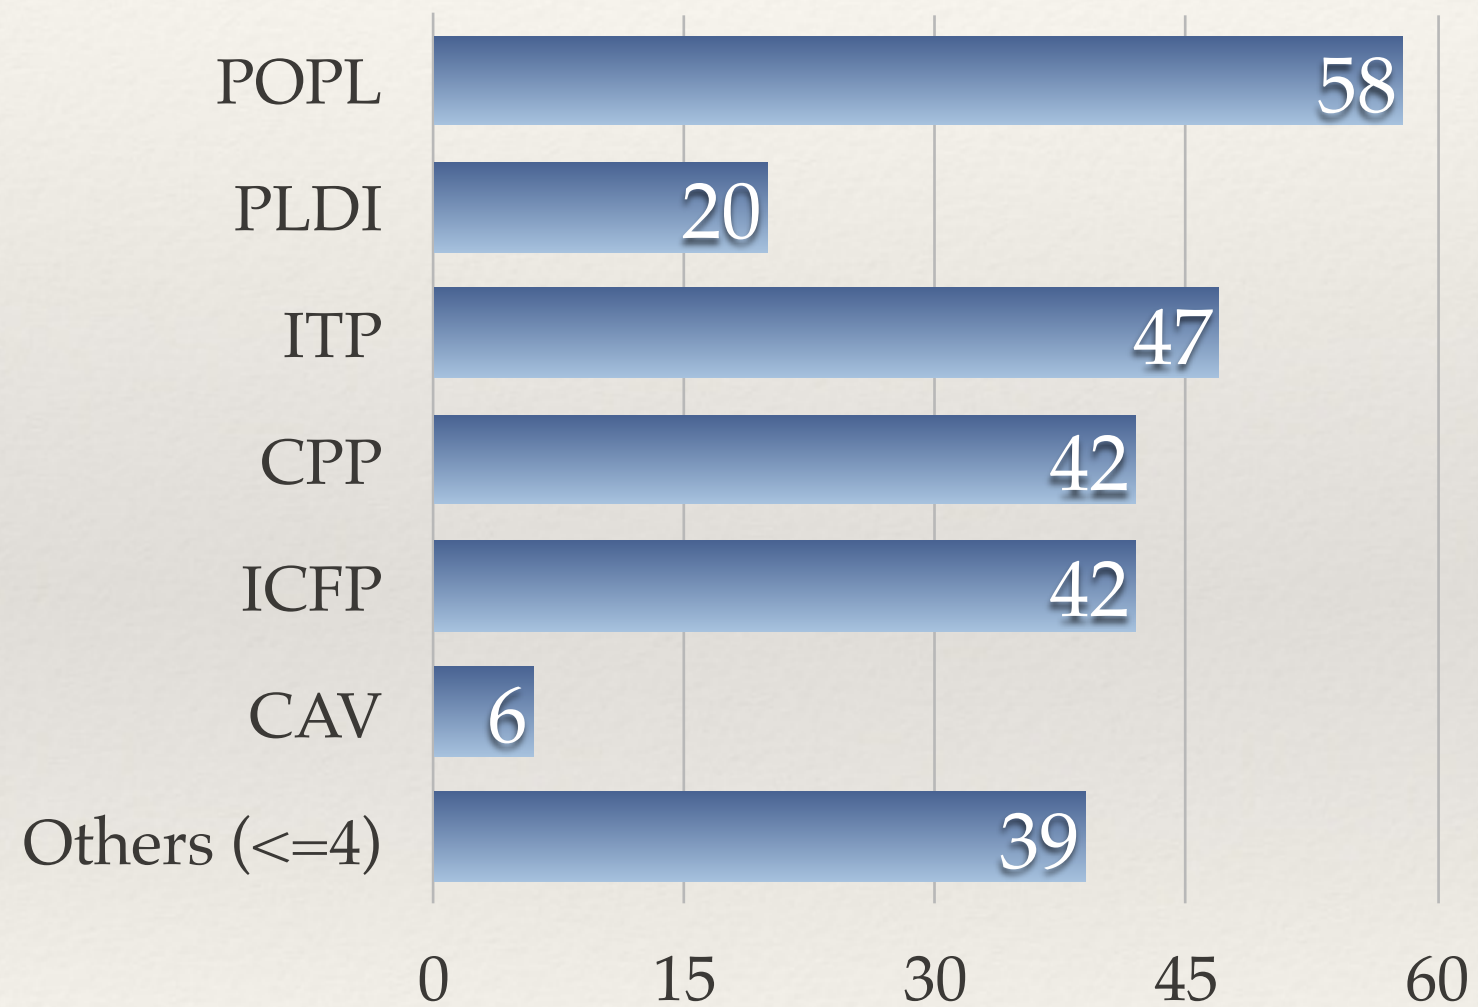

Users

Coq versions in use

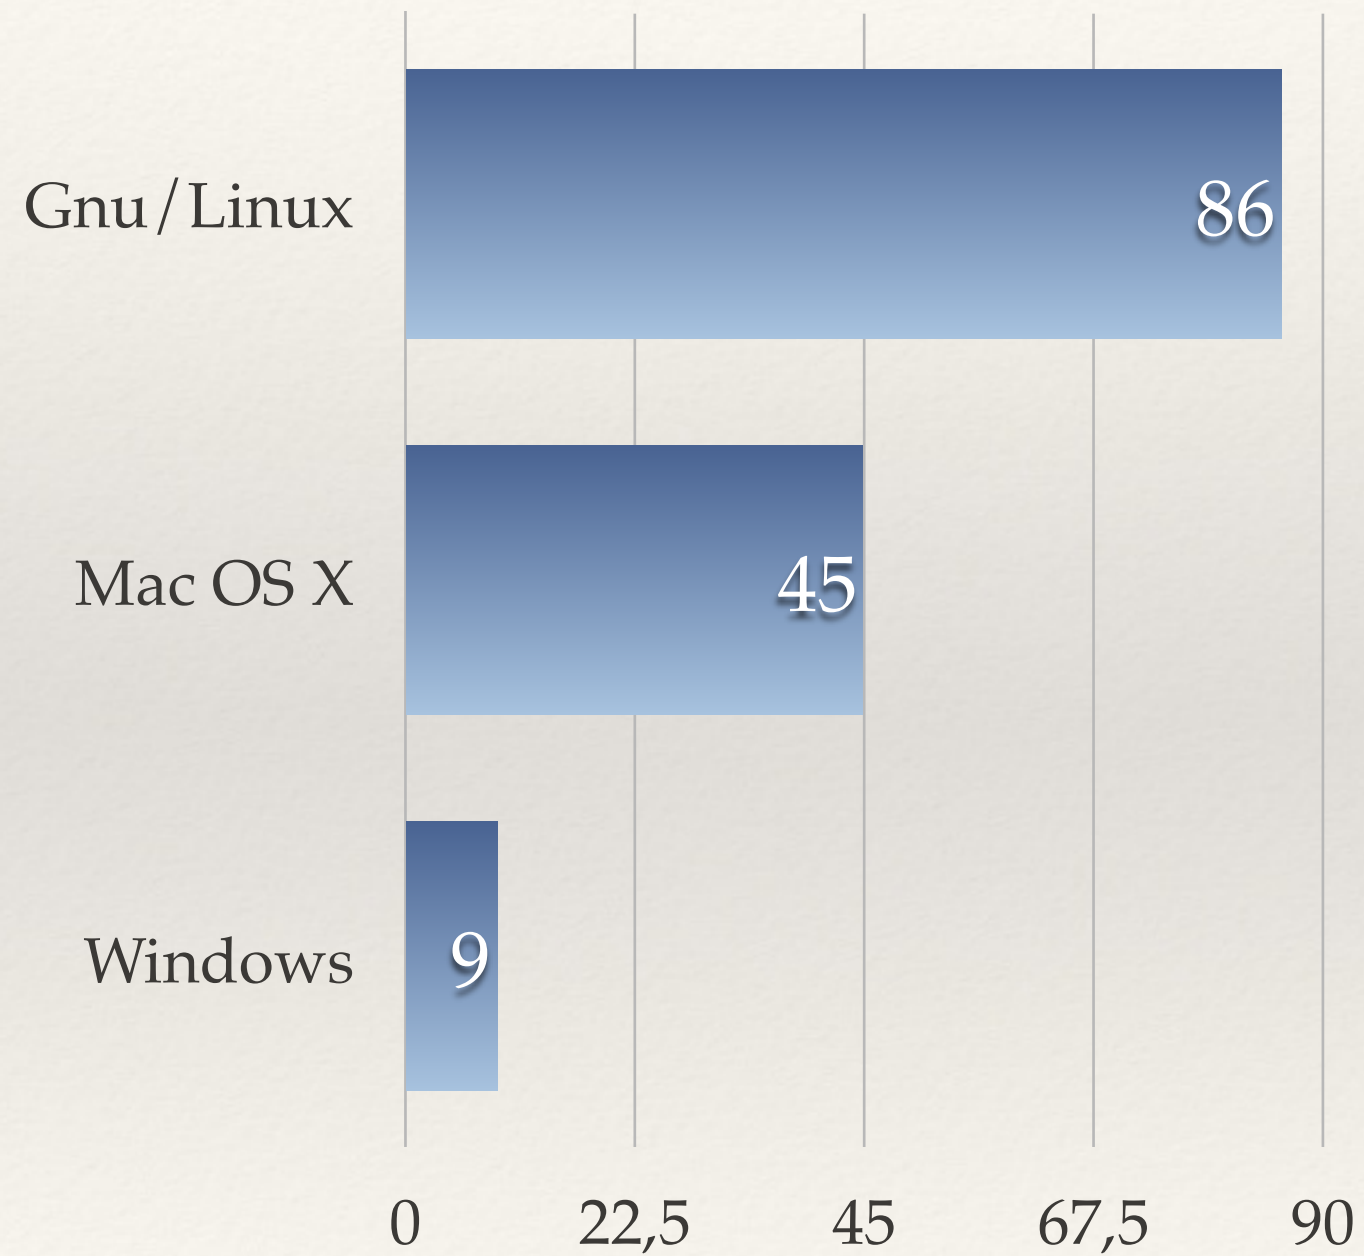

Coq versions (cont)

75% of devs have been ported at most on 3 versions

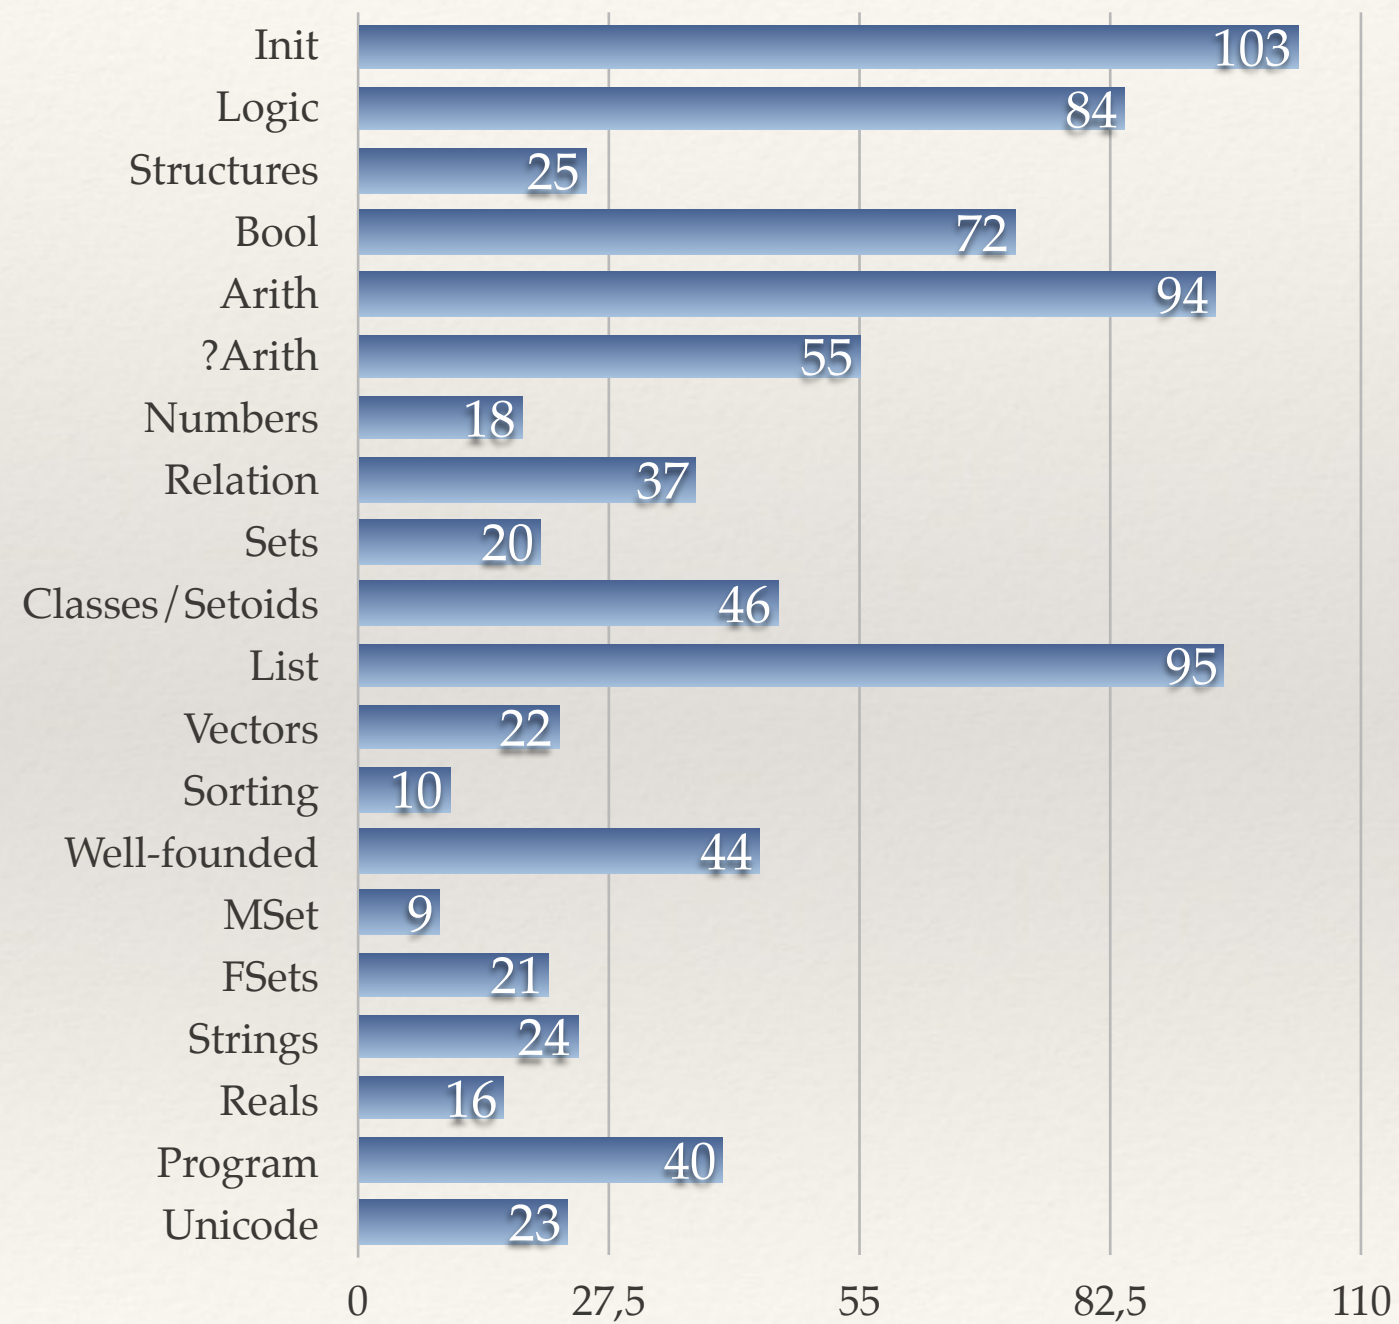

OS

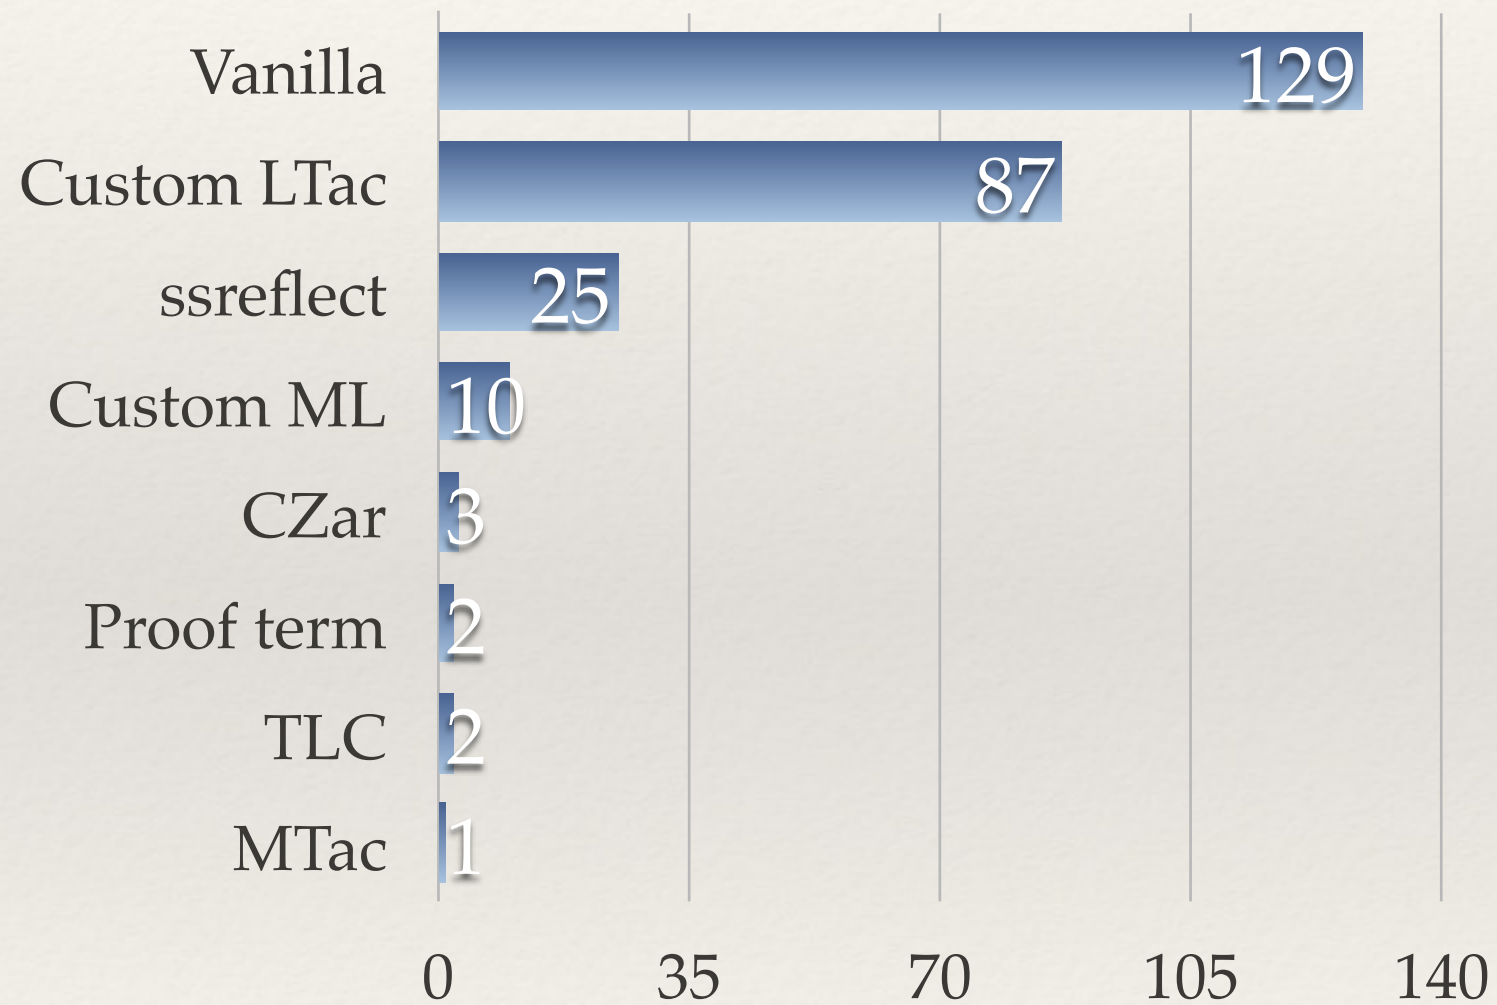

Usage

Libraries
Tactics
Features

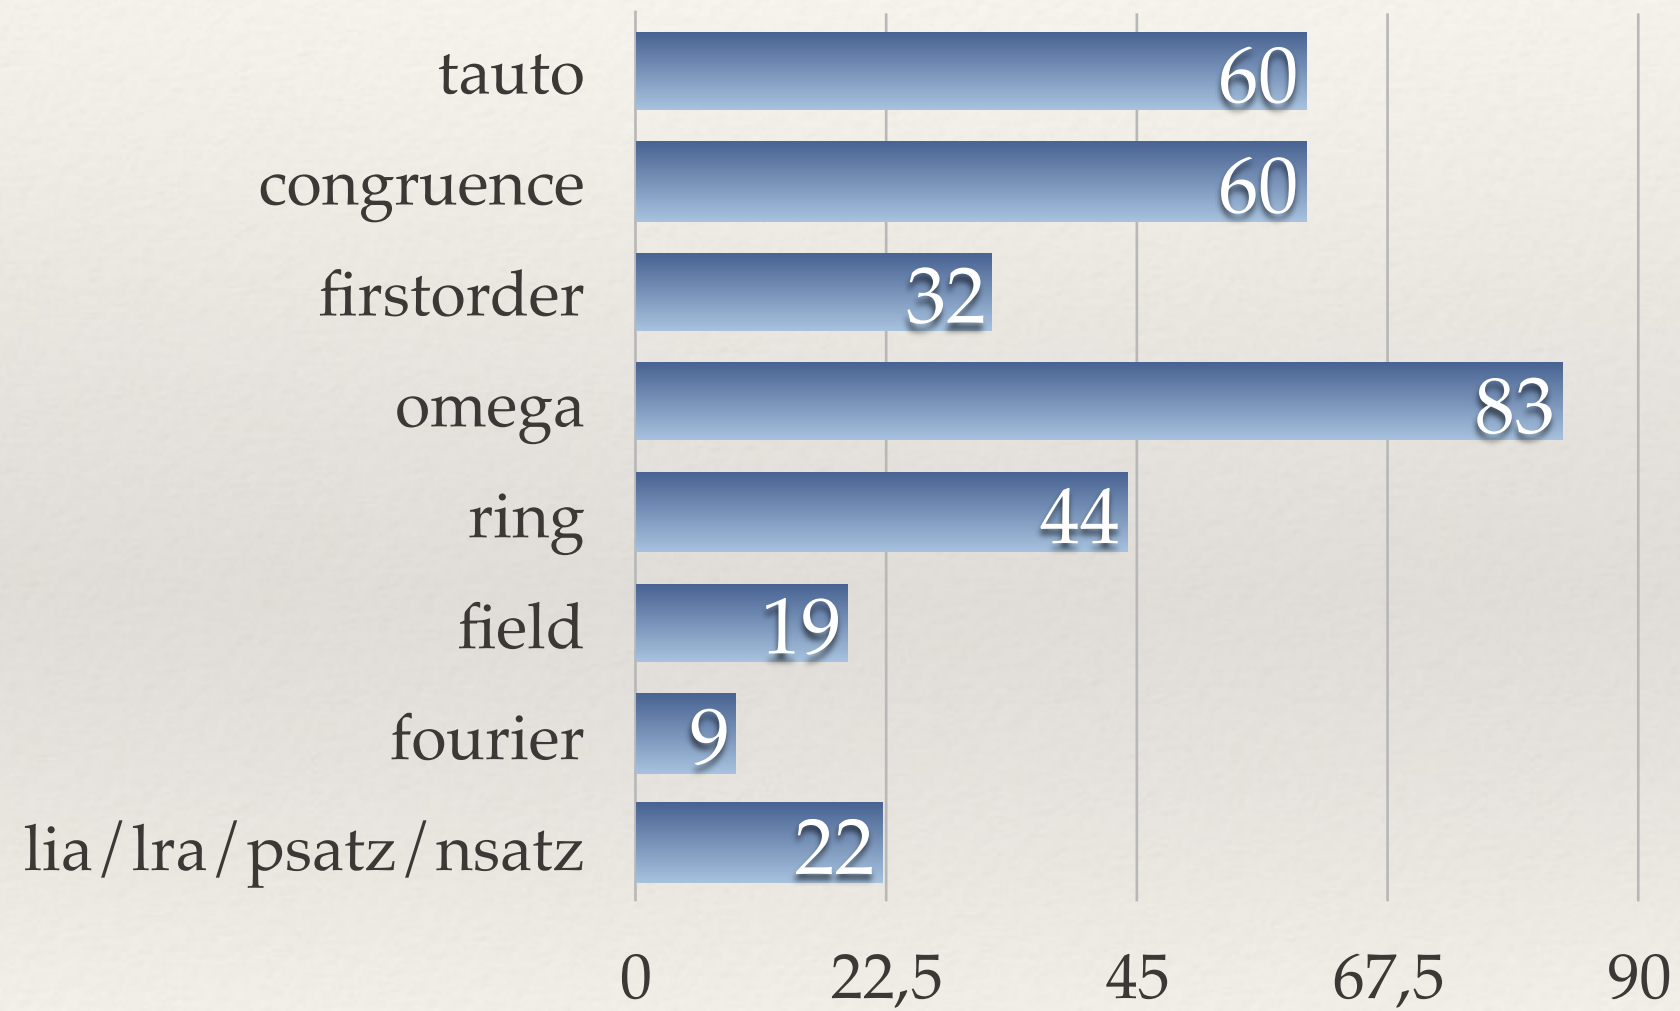

Std lib

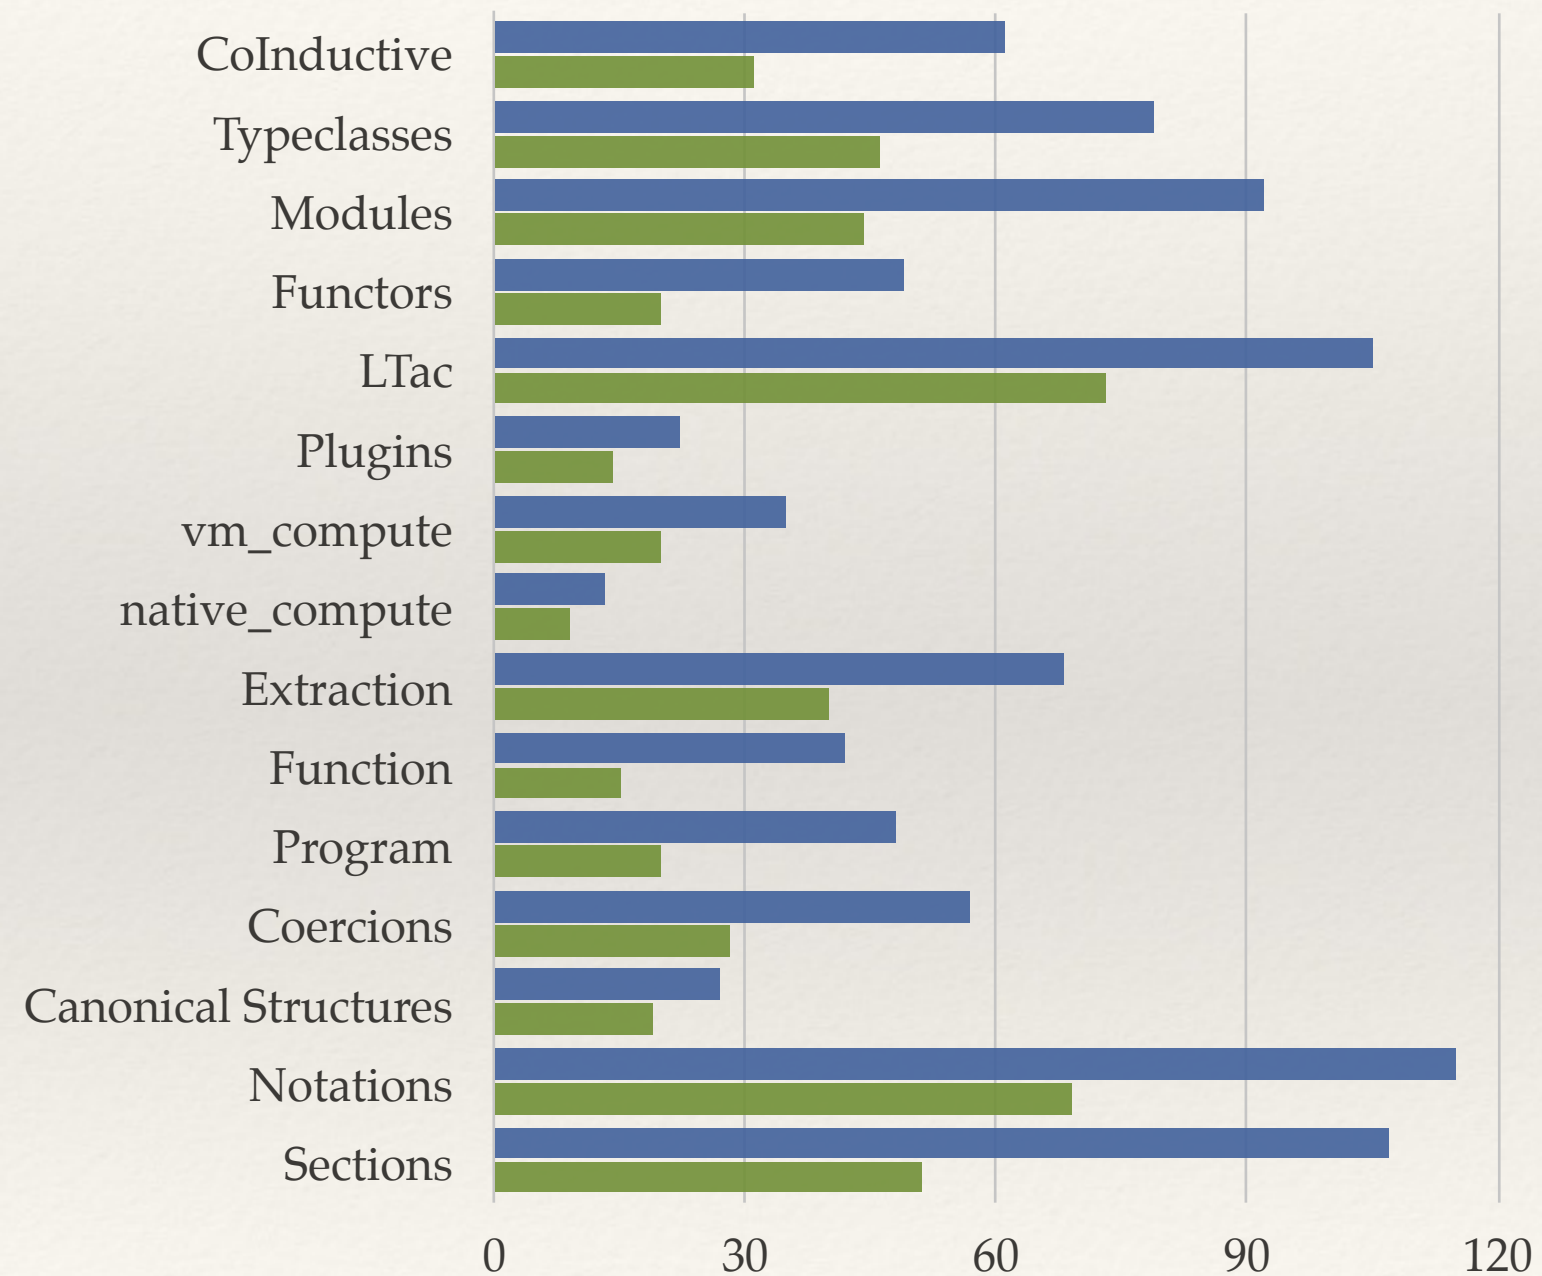

Tactic language (main)

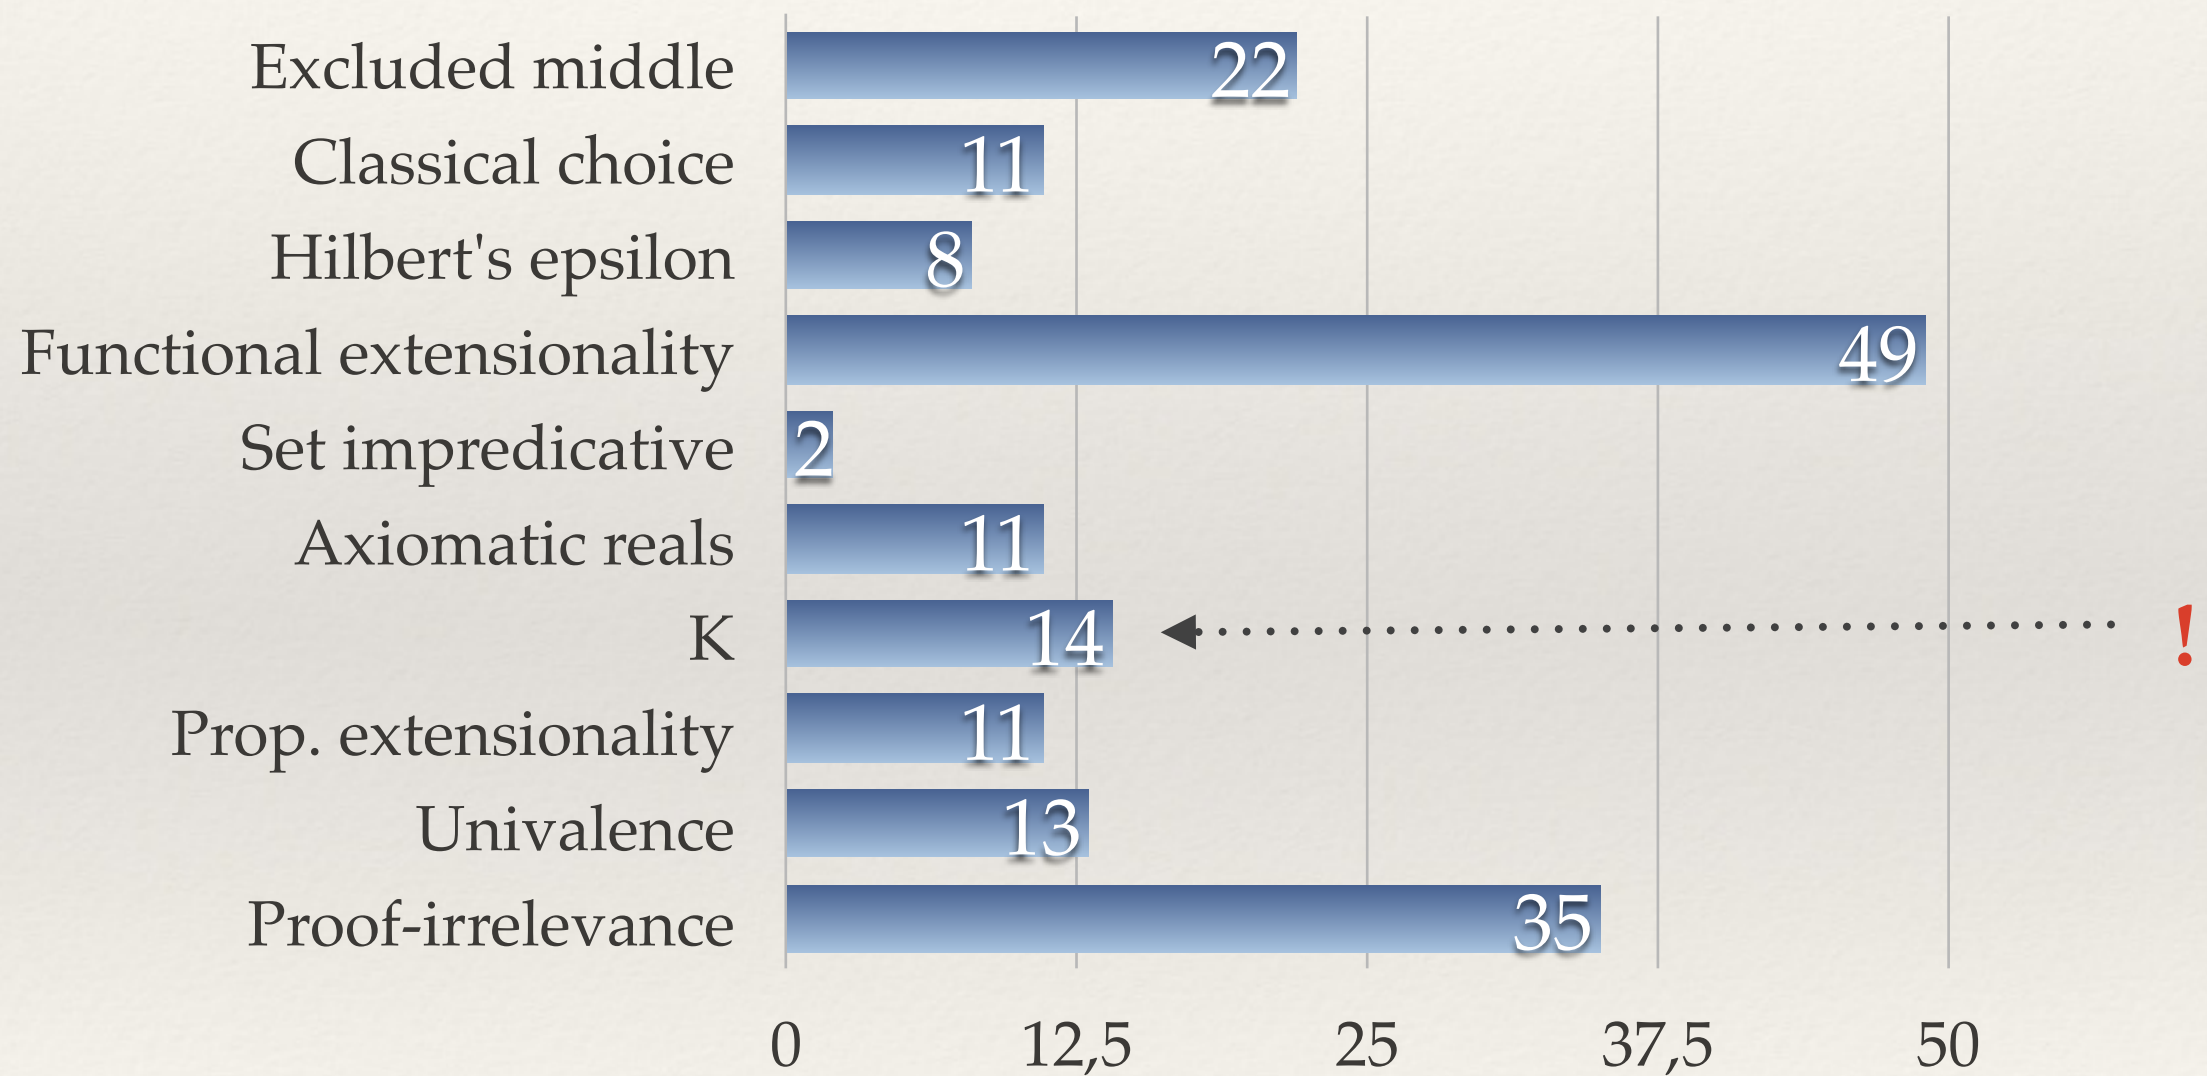

Tactics

Features

Axioms

Future

Priorities
Dev. process
Wishes

Priorities

Single transferable vote

$s = 1.1$

$s = 1.5$

Term language	Quality of std lib	Quality of std lib
Quality of std lib	Search tools	Term language
Search tools	Term language	Search tools
New tactic language		
Logical expressiveness	Performance	Logical expressiveness
Performance	LTac (eff., expr.)	LTac (eff., expr.)
Package manager		

How do you report problems?

Feeling informed about the future?

“I discover changes when you release beta versions, i.e., when it is too late to provide feedback”

“A website would help”

Feeling better about the future?

“Coq is operated like a research project, not a project maintaining production software”

Shortcomings? Wishlists?

“Automation”,
“Quickcheck”,
“Sledgehammer”,
SAT/SMT

“Document heuristics”

“Revoke notations/
coercions”, more local
stuff

“Import too coarse
grained”

~15 pages of raw text

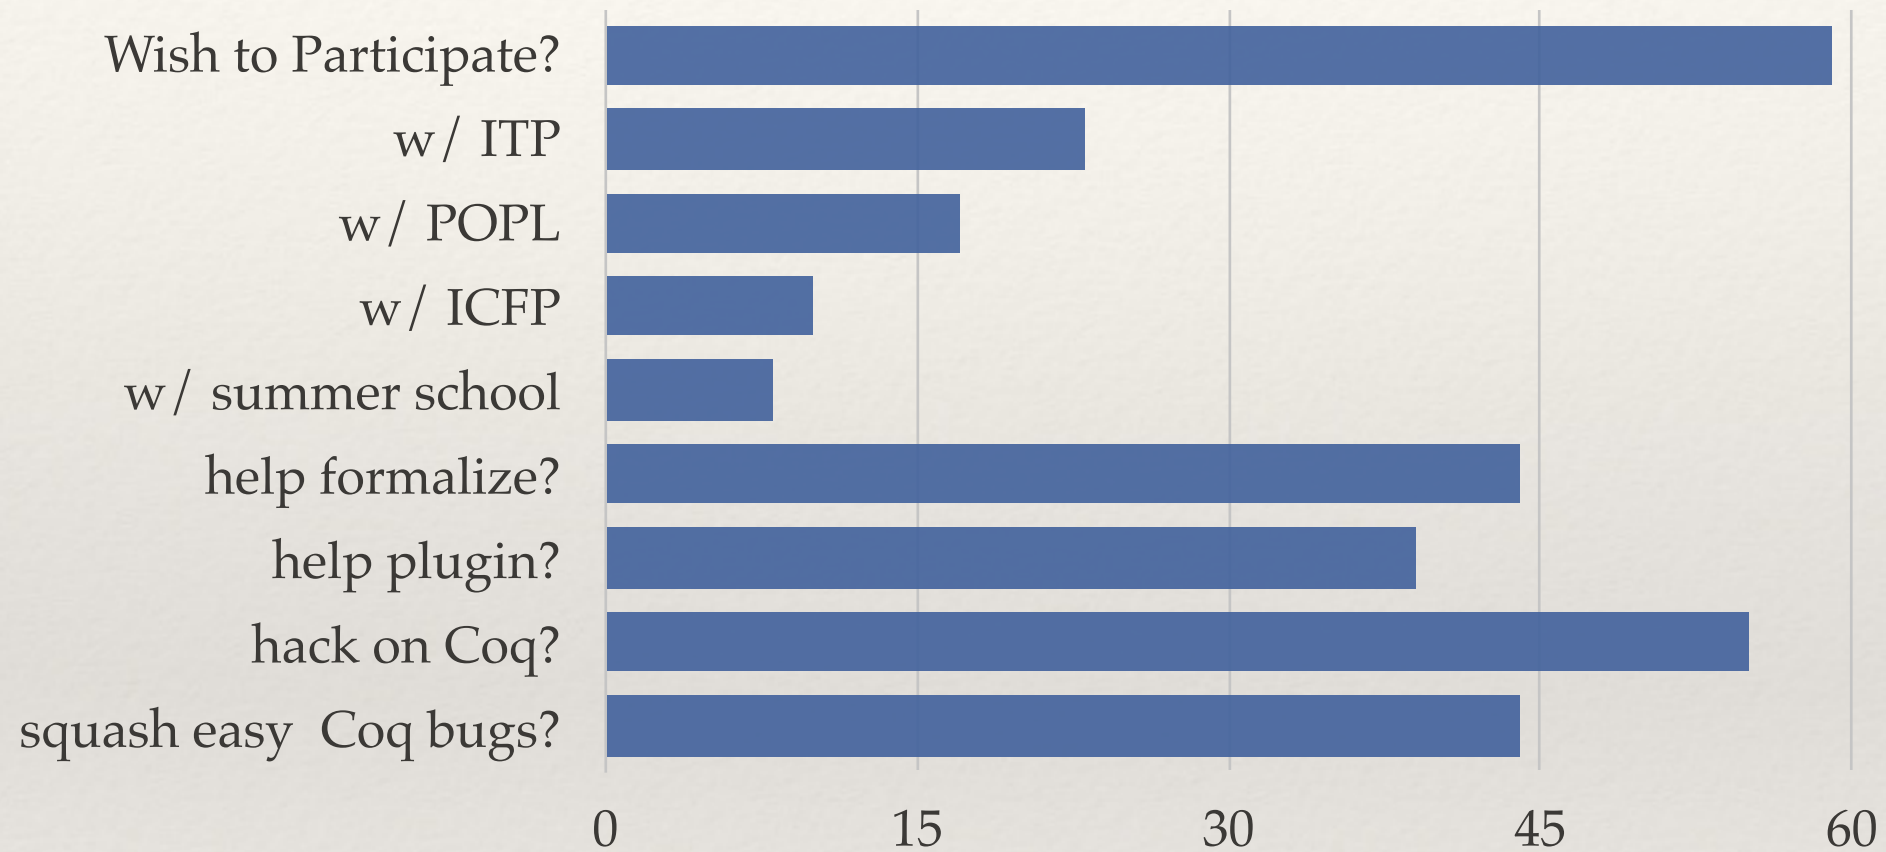

“Check / About / Search”

“Type class inference
loops”

“Document the code”

Tooling: build system,
documentation, package
management ...

Bootcamp

Most people can transfer copy-rights to Inria for contributions on the Coq code

The competition :)

TL; DR

backward compatibility with OCaml 3.12 is not a requirement

most people do not care about camlp4/camlp5

most people compile Coq themselves

if it worked, people would use a package manager for Coq

Thanks for your attention

Conclusion

- too much data
 - crowdsource processing?
 - too early to get feedback
-
